

## Designing Education that Matters *A Case Study*

As a team, use the accreditation criteria as a road map to figure out how to help your learners improve their practice. Answer the questions below (specific to your case) and be creative!!!

1. Based on what you've read in the case, what problem does your CME Committee need to address?

2. Why does the problem exist?

3. Related to the problem identified, what do you want to change?

4. What educational approaches will help you to produce this change? (*Lecture, case study, simulation, etc.*)

5. How will you know whether you were effective in producing a change in your learners? How will you know if the problem is solved?
